

xHeal Email Voice Rules

Last updated: 2026-03-06

Use case: lifecycle, onboarding, newsletter, nurture, reactivation

1) Voice Summary

Write like a calm, clinically competent guide. Be reassuring without being soft. Be specific without sounding technical for its own sake.

2) Tone Settings

- Formality: moderate
- Warmth: high
- Seriousness: high
- Boldness: moderate
- Jargon: low

3) Core Email Formula

1. Context: what the reader is feeling or facing
2. Clarity: what changed / what matters now
3. Action: one next step

Format:

- Opening: 1-2 short paragraphs
- Body: 2-4 scannable blocks
- Close: one clear CTA

4) Writing Rules

Do:

- Lead with outcome and time horizon
- Use concrete phrasing (what, why, next)
- Keep sentences short and direct
- Use one primary action per email

Do not:

- Overuse hype words
- Stack multiple asks in one email
- Use fear-heavy copy
- Make medical claims beyond support/awareness

5) Preferred Vocabulary

- early signal
- clear next step
- care plan
- follow-up
- pattern
- timeline
- specialist-ready

Avoid vocabulary:

- revolutionary
- breakthrough cure
- game-changing
- seamless solution
- leverage/synergy

6) Subject Line Style

Use:

- Clear benefit + specificity
- Contrasts ("Stop X. Start Y.")
- Pattern-focused questions

Examples:

- What changed before your last flare-up?
- One clear next step for this week
- Your care timeline is ready
- Stop reacting late. Start acting early.

7) Preheader Style

- Extend the subject with concrete context
- 40-90 characters

Examples:

- See your likely trigger pattern and what to do today.
- Bring one specialist-ready timeline to your next visit.

8) CTA Standards

Primary CTA options:

- Start care now
- Get your care plan
- Build my health timeline
- View my report

Rule:

- Exactly one primary CTA button/link per email

9) Required Safety Line (When Needed)

Use on medical-adjacent emails:

"xHeal supports informed decisions with your care team and does not diagnose, treat, or replace professional medical care."

10) Reusable Blocks

Reassurance opener:

"If you're feeling unsure about what your data means, you're not alone. Most people track a lot and still don't get clear answers."

Action bridge:

"Here's the key signal we want you to look at this week, and the next step that follows from it."

Care-team bridge:

"When you share one complete timeline, appointments can focus on decisions instead of reconstructing history."

11) QA Checklist

- One audience segment targeted?
- One message objective?
- One CTA only?
- Evidence-based tone?
- Compliance-safe framing included if relevant?
